

NEW TO THE FLEET:

## Royal Caribbean Cruises Adds Autonomous Vehicle

At Sea Beyond, where Royal Caribbean Cruises Ltd. is previewing the future of cruise vacations, the company will be displaying a newly acquired Navya Arma driverless shuttle.

The fully autonomous, electric shuttle can carry up to 15 guests in climate-controlled comfort.

The shuttle will initially be used as a new way to transport guests and cruise ship employees at ports and cruise destinations to save time and make embarkation and debarkation easier, more comfortable and more fun.

Navya autonomous shuttles are currently in use at a number of airports, on university campuses and in urban neighborhoods in Europe.
